RECORDLY

From ML prototypes to monitored production, with releases that stay clear of quarter close

MLOps best practices, automated deployment and monitoring on your Snowflake + dbt, Databricks ML and SAP S/4HANA. A fixed validation phase, then each pipeline transition priced on its own merits: at most €56,960 (excl. VAT), firm and binding for 9 months. UPM standard terms, no deviations.

Proposal to Tapio Rantala, Vice President of Enterprise Data & Analytics · Recordly Oy · Helsinki

Technical approach: one release path from notebook to SAP

STAGE	WHAT WE SET UP	CONTROL
1 • Features	Snowflake + dbt models with tested feature tables	dbt tests and data contract on every input
2 • Train and register	Databricks ML from one template, model registry, versioning	Registry approval by your named model owner
3 • Automated deployment	CI/CD in your repositories: test, promote, deploy, rollback to the previous version	No manual deploys. Every release has a checklist
4 • Monitoring	Drift, accuracy, freshness and cost per pipeline, alerts into your chat tool	Retry and alert, so nothing fails silently
5 • SAP S/4HANA	Staged write-back, reconciled before posting	Named owner per integration

Out of scope: new platforms or licences, new use cases, custom ABAP. Your existing stack only.

The same platform serves assistants: frontline mill vs enterprise chat

	FRONTLINE MILL ASSISTANT	ENTERPRISE CHAT INTERFACE
Users, content	Operators and maintenance staff; answers grounded in mill procedures and shift data	Office staff, broad questions across functions
Priority	Accuracy, speed, Finnish and English, read-only	Access control, breadth, usage cost
Our view	**Start here.** Narrow scope is testable and operationally valuable	Later, once access rules are agreed

What the MLOps platform gives both, with no extra build in this price: the same registry and approval, model serving behind one deployment path, an evaluation set run before every release, and monitoring of quality, usage and cost.

Your history and our safeguards

YOUR CONCERN	OUR SAFEGUARD
A bespoke pipeline collapsed at quarterly close	**Quarter-close-safe releases:** no deployments in the 5 working days around close, dates from your finance calendar. A rehearsal passes before the first production release. Rollback in one step
Accountability across the administrative matrix	**Tuomas Rantanen is your dedicated coordinator:** one accountable contact, a monthly steering note, escalation path
Billing drift and calendar billing	**Payment per accepted stage only.** No timesheets, no hourly overage
Mill time vs central commitments	Staff time table below, agreed at kick-off
Direct hiring after 12 months	Accepted, no fee. Everything lives in your repos from day 1

> **Honest unknown:** which prototypes are production-ready, and the SAP write-back interface, are confirmed at the week-3 gate. If one fails, we swap it. The fee does not change.

Plan, and the staff time we need from you

WEEKS	WORK	GATE
1–3	Template, conventions, prototype review. Pairing starts in week 1	**Go/no-go:** a prototype enters build only with passing input tests and a named owner
4–7	First model through CI/CD, monitoring and SAP write-back	Quarter-close rehearsal passed
8–12	Models 2–3, drift alerts, runbooks, handover to your team	Your team runs a release alone

YOUR PEOPLE (PLANNING ASSUMPTION, AGREED AT KICK-OFF)	TIME
Mill operational staff, per pilot mill (max 2)	**About 8 h in total:** 2 h interview, 2 h workshop, 4 h acceptance checks. Never during shifts critical to production
Central domain liaison	**About 0.5 day per week** for 12 weeks (6 days): priorities, approvals, SAP contact
Model owner and SAP owner	1 h per week each

Team: an ML engineer and a coordinator

ROLE	CERTIFICATIONS	TIME
Henna Kallio, forward-deployed ML engineer. fi, en	Databricks ML Professional · SnowPro Core · dbt Analytics Engineering	44 days from 1 Dec 2026
Tuomas Rantanen, solution architect and **dedicated coordinator**. fi, en	Azure Solutions Architect Expert	16 days: steering, design review, escalation

Nordic process-industry experience: reference calls with process-manufacturing clients offered at shortlist, with their consent. Replacement of equal seniority within 10 working days, overlap at our cost.

Optional, not in the price: Recordly **Virtual Data Engineer** (€9,000/month, fixed term) can take repetitive dbt work inside your Snowflake. A person approves every change. Real result: a pipeline built, tested and validated in 30 min instead of 12 h. Only if you decide so.

Price and terms

ITEM	EFFORT	
Phase 1, validation (fixed): MLOps template, deployment workflow, monitoring, first model live	Henna 17 d × €960 + Tuomas 7 d × €920	€22,760
Each further pipeline transition, ordered separately (up to 3)	Henna 9 d × €960 + Tuomas 3 d × €920	€11,400 each
Maximum, if all 3 are ordered		**€56,960 excl. VAT**

- **Firm and binding for 9 months** from submission (until 29 July 2027)
- **No single indivisible sum.** After Phase 1 you decide pipeline by pipeline, on its own merits and on your administrative calendar. Each transition is a separate order, paid on acceptance; you can stop after any of them.
- Payment never by calendar: Phase 1 on acceptance of the first live model; each transition on acceptance of that pipeline in production
- Standard purchase agreement **as is, no deviations**. Recruitment after 12 months without a fee accepted.
- Snowflake and Databricks consumption stays on your accounts. No new licences.
