RECORDLY

Snowflake FinOps for Säästöpankkiryhmä: clean up once, then keep costs under control

Cost governance on Snowflake and Power BI, compliant with FIN-FSA, EBA and DORA. Delivered in Finnish and Swedish. Everything runs inside your own Azure and Snowflake environment.

Proposal to Rasmus Lindqvist, Head of Data and Analytics · Recordly Oy · Helsinki

The proposal in one page

Definition (3 weeks)	Cost baseline per member bank, workload and warehouse; governance model; FinOps target state
Delivery (2 months)	Cleanup: warehouse sizing, auto-suspend, unused objects, query and dbt model optimisation, Power BI refresh tuning, tagging and chargeback
Ongoing (3 months)	Recordly **Virtual Data Engineer in run mode**: 24/7 cost and performance monitoring inside your Snowflake account. **Your team approves every change.**
Price	**€57,360 total** (breakdown on slide 6)
Team	**Johanna Berg** (FinOps lead, ex-bank), **Markus Ek** (Snowflake on Azure) and **Kaisa Virta** (DORA advisor). All three speak **Finnish and Swedish**.

Compliance and governance

REQUIREMENT	HOW WE MEET IT
DORA	Change control through pull requests with human approval; audit trail of every agent action (auditor agent); exit plan, since everything stays in your repositories
FIN-FSA / EBA outsourcing	Recordly as an ICT third party: information for your register of information, audit and access rights, no subcontractors
Non-European AI toolchains	**The VDE runs inside your Snowflake account**, in your Azure region, using Snowflake's own AI services on your credits. Data isn't copied to Recordly systems.
Member banks	Cost reports and chargeback per bank, in Finnish and Swedish

How the cost cleanup works

STEP	ACTION	TYPICAL SAVINGS LEVERS
Baseline	Credits by warehouse, user, dbt model and Power BI dataset; tag coverage	Visibility first
Quick fixes	Right-size warehouses, auto-suspend, resource monitors, remove unused tables and clones	Idle compute, storage
Optimise	Rewrite the most expensive queries and dbt models; incremental models; Power BI refresh schedules	Compute per report
Govern	Budgets and alerts per member bank, tagging policy, monthly FinOps review	No relapse
Run	The VDE watches cost and performance daily and opens PRs for fixes; **your team approves**	Continuous

> Honest unknown: the savings potential is quantified in Definition, from your real consumption data. We don't promise a percentage before we've seen it.

Company, team and AI in our delivery

RECORDLY AND THE TEAM

- Helsinki-based data and AI consultancy; financial statements and credit rating provided with the final offer; **no subcontractors**
- **Johanna Berg**, FinOps lead, ex-bank: FinOps Certified Practitioner, SnowPro Core; fi, sv, en
- **Markus Ek**, data engineer, Snowflake on Azure: SnowPro Core, Azure DE Associate; sv, fi, en
- **Kaisa Virta**, regulatory and DORA advisor: CISA; fi, sv, en

AI-DRIVEN DELIVERY: MEASURED RESULTS

- Virtual Data Engineer, real projects: a semi-complex pipeline built, tested and validated in **30 min instead of 12 h**
- Migration to dbt + Snowflake: **about 30 credits per migrated table**, a predictable cost
- Business questions answered by the agent: **developer context switches per day went to zero**
- Cost and performance optimisation is a standard VDE task

Preliminary pricing: definition, delivery, ongoing

PHASE	EFFORT	PRICE
Definition	8 days × €920	€7,360
Delivery	22 days × €920	€20,240
Ongoing (3 months)	VDE 3 × €9,000 flat + 3 lead days × €920	€29,760
Total		**€57,360 (excl. VAT)**

- You may stop after Definition with no further commitment.
- Snowflake AI credits used by the agents are billed on your account and reported monthly.
- Standard terms accepted; no contractual deviations.
