RECORDLY

Agentic AI hackathon: working prototypes, honest limits

Two days on your SAP, Datasphere, SAC and Azure. €12,200 fixed. No contract deviations.

Background	An earlier pilot stalled when edge cases were glossed over and autonomy was oversold
Aim	3–4 agent prototypes your people build, tested on **real Datasphere data**, each with a written edge-case register
Our stance	Agents read governed data and **propose**; a person approves. No autonomous write-back to SAP
Your time	A 45-minute scoping call and a 45-minute readout. No recurring status meetings

Proposal to Rasmus Vuorinen, Director of Digital Analytics · Recordly Oy · Helsinki

Technical approach and deliverables

LAYER	HOW IT WORKS	BOUNDARY
Data	Agents read **certified Datasphere views** (S/4HANA material, plant, batch) and SAC KPIs	Read-only. Access inherited from SAP authorisations, row-level by plant
Agents	Built in Kemira's Azure subscription with the model endpoint Kemira already approves	No new platform, no new licences
Chat	Agents post findings and questions to a test channel in your chat tool	Production bot needs your IT approval: out of scope
Control	Every run logged: input, tool calls, answer, who approved	Sensitive fields masked before any model sees them

Candidate workflows (chosen with you in prep): data-quality triage on Datasphere rules · KPI "why did it move" explainer · master-data anomaly queue

Deliverables: D1 seeded sandbox agent · D2 3–4 working prototypes in your repo · D3 edge-case register per prototype · D4 go/no-go note per prototype

Edge cases and limits, stated up front

No promise of autonomous resolution. We measure it and report the misses.

EDGE CASE IN SAP DATA	WHAT THE AGENT DOES
Missing or duplicate master data	Flags it, **escalates to a data owner**
Unit or currency mismatch between S/4HANA and Datasphere	Refuses to compare, shows both values
Rows the user may not see (plant authorisation)	Returns nothing for them and says why
Stale or late-loaded data	States data age before answering
Conflicting sources, ambiguous request	Asks a question, never guesses

> Each prototype is scored on a **seeded edge-case test set**: cases resolved, escalated, and wrong. The readout shows the real numbers.

Plan: a live agent on your data before the hackathon starts

WHEN	WHAT	RESULT
Prep, weeks 1–3	Scoping call, pick workflows, read-only access to **one plant's Datasphere space**, build and test the seed agent	**Live demo on day 1, hour 1**
Hackathon, 2 days on site in Helsinki	12–16 participants (assumed) in 4 teams. Day 1 build, day 2 edge-case testing and demos	3–4 prototypes with test results
Follow-up, week after	Code cleanup in your repo, edge-case registers, 45-minute readout	Go/no-go per prototype

> **Honest unknowns, closed in prep:** (1) model endpoint available in Kemira's Azure tenant, otherwise we use the one you approve; (2) data access granted before the event, otherwise a masked extract and we say so on the day; (3) final headcount and skill level.

Team: three seniors, certified, dates agreed at signature

ROLE	EXPERIENCE AND CERTIFICATIONS	DAYS
Senior AI / ML engineer (lead facilitator)	9 yrs, ML for manufacturing on Azure. Azure AI Engineer Associate · Azure Data Scientist Associate. Finnish, English	6
Senior data engineer (SAP, Datasphere)	10 yrs, S/4HANA to Datasphere pipelines. SAP Certified Associate – Data Engineer – SAP Datasphere · Azure Data Engineer Associate. Finnish, English	5
SAP data architect (review)	12 yrs, SAP BW, Datasphere, SAC. SAP Certified Associate – Data Analyst – SAP Analytics Cloud. Finnish, English	2

Two facilitators on site both days. Any replacement is of equal seniority and agreed with Kemira first.

Price and terms

Fixed total €12,200 (excl. VAT)

ROLE	DAYS	DAY RATE	AMOUNT
Senior AI / ML engineer	6	€960	€5,760
Senior data engineer	5	€920	€4,600
SAP data architect	2	€920	€1,840
Total	**13** (prep 5, hackathon 5, follow-up 3)		**€12,200**

- **Fixed price:** effort above plan is Recordly's risk. Travel and on-site days in Helsinki included
- **No licences.** Model usage runs on Kemira's own Azure subscription, with a per-team cost cap agreed in prep
- **Kemira's standard purchase agreement: no deviations.** Kemira may hire deployed consultants after 12 months **without placement or transfer fees**: accepted in full
- Payment per Kemira's standard terms, invoiced after the readout is accepted. All code and results are Kemira's property
