RECORDLY

Know what every member bank costs on Snowflake, then keep it under control

FinOps cleanup of your Snowflake, Azure and Power BI landscape. FIN-FSA, EBA and DORA by design. Finnish and Swedish. €45,080 in three phases, excl. VAT.

Proposal to Rasmus Lindqvist, Head of Data and Analytics · Recordly Oy · Helsinki

Three phases, each with a gate you control

PHASE	TIMING	WHAT YOU GET	YOUR GATE
Definition	4 weeks from 1 Dec 2026 (planned)	Cost baseline per member bank and workload, with an attribution method. Inventory of pipelines tied to non-European AI toolchains. DORA register entries. Read-only access only	Baseline (at least 3 months of usage) signed off by you, architecture board approves. **You may stop here, no further commitment**
Delivery	8 weeks	Guardrails, budgets and alerts: alert-only for 2 weeks, then enforced, rollback ready. Warehouse right-sizing. Top-20 query tuning. Power BI refresh tuning. Cost report per bank	Savings measured against the baseline. Write access only on approved changes
Ongoing	Monthly, first 3 months	Monthly cost review and anomaly follow-up	Cancel with one month's notice

Team	**Proposed FinOps lead** (FinOps lead; banking experience required), **Proposed DE** (Snowflake on Azure), **Proposed DORA advisor** (regulatory and DORA advisor). Finnish, Swedish and English are requirements; candidate evidence is pending
Price	**€45,080 total, excl. VAT**: 49 person-days × €920 (slide 7)

Cost visibility per member bank and workload, with guardrails inside your own Snowflake and Azure

1 · COST SOURCES

- Snowflake account usage
- Azure cost management
- Power BI capacity metrics
- Temenos feeds, via your Snowflake loads

→

2 · COST MODEL (SNOWFLAKE)

- Tags per member bank
- Cost per workload and query
- Trend and anomaly flags

→ as code

3 · GUARDRAILS

- Resource monitors and budgets
- Auto-suspend, right-sized warehouses
- Alerts to cost owners

→ reviewed

4 · REPORTING

- Power BI FinOps view
- Monthly report per bank, fi and sv
- Savings vs. baseline

- **Your tenant, EU only.** No data goes to non-European AI toolchains. **Inventory method:** scan Snowflake external functions, integrations, tasks and query history, plus Azure app registrations and egress. Each finding is classed as remove, replace or exit plan, and feeds the DORA register-of-information entries. Replacement of a pipeline larger than 2 days is scoped as a change request after Definition.
- **Survives restructuring:** a member-bank mapping table lets costs be re-pointed when banks integrate, without rebuilding the model.
- **Attribution:** query and role tags where warehouses are per bank, usage-based allocation where shared. The remainder goes to a visible "unallocated" line. Definition reports the unallocated % and you approve the allocation rules.
- **Definition gate:** baseline = at least 3 months of usage, read-only roles, signed off by you.

Optimisation plan: every lever has a measure and a baseline

LEVER OR CONTROL	HOW IT IS MEASURED OR PROVEN	PHASE
Non-European AI toolchain pipelines	Inventory and decision log (DORA ICT risk)	Definition, then Delivery
Warehouse right-sizing and auto-suspend	Credits per workload, before and after	Delivery
Query and model optimisation, top 20 spenders	Runtime and credits per query	Delivery
Storage and retention settings	Storage cost trend	Delivery
Power BI refresh schedules	Capacity utilisation	Delivery
Budgets, monitors and alerts per cost owner	Anomalies caught before the invoice	Delivery, Ongoing

> **Honest unknown:** the savings potential is quantified in Definition from your real consumption. We quote no savings percentage before we have measured it, and you set the targets.

Out of scope: new tools or licences, re-platforming of the data platform, changes to Temenos feeds. A flagged non-European pipeline larger than 2 days to replace is a separate change request. Every guardrail change goes through your change board.

Guardrails go live in two steps: alert-only for 2 weeks, then enforce. Hard suspend only on non-production warehouses. Every change is code in your repo, reviewed by your change board, with a rollback.

Access: read-only to Snowflake account usage, Azure Cost Reader and Power BI capacity metrics in Definition. Write access only in Delivery, on approved changes.

AI-driven cost management: real results, and the limits we state

RECORDLY VIRTUAL DATA ENGINEER, REAL PROJECTS

CASE	OUTCOME
Migration Matillion + Redshift to dbt + Snowflake	About 30 Snowflake credits per migrated table
Semi-complex pipeline: build, test, validate	12 h by hand, 30 min
Power BI report rebuilt after a migration	Tens of seconds
Business questions about pipelines	Developer context switches per day: several to 0

Cost and performance optimisation is a standard task for it. **None of these is a FinOps saving figure, and we have no saving percentage to quote.**

HOW IT WOULD WORK FOR YOU

- Agents run **inside your Snowflake account** on your Snowflake AI credits, built on Snowflake and dbt
- They open **pull requests**. Review agents test every change, auditor agents keep an audit trail. **They cannot approve or merge: your change board does.**
- **Limit:** it uses Snowflake's AI services, so we do not call it a European toolchain. It adds no vendor beyond the platform you already run. Where those services process your data is confirmed in Definition and enabled only if your architecture board approves.
- **Option, not in the total:** from Delivery's end, €9,000 per month for a 3-month fixed term plus separately nominated AI-qualified architecture setup and about 1 architect day/month. Scope and cost require a separate agreement.

Company, governance and team

RECORDLY OY AND DORA TERMS

- Helsinki data and AI consultancy. Recordly employees only, **no subcontractors**
- **Financial stability:** financial statements and credit rating provided with the shortlist
- **Accepted:** audit and access rights, register-of-information data, exit plan, no subcontracting without approval, EU-only processing
- **Finnish and Swedish:** workshops, reports and documentation in both languages, for member banks in both language areas
- Process first: every change through your change board, a written decision log, monthly steering

TEAM, IN FINNISH AND SWEDISH

PERSON	ROLE	REQUIRED CERTIFICATES	DAYS
Proposed FinOps lead	FinOps lead; banking experience required	**FinOps Certified Practitioner · SnowPro Core**	22
Proposed DE	Data engineer, Snowflake on Azure	**SnowPro Core · Azure DE Associate**	23
Proposed DORA advisor	Regulatory and DORA advisor	**CISA**	4

Planned from 1 Dec 2026, subject to CV, language, certification and availability verification before commitment. Replacement only with your approval, equal seniority, 2-week overlap at our cost.

Preliminary pricing: definition, delivery, ongoing

PHASE	EFFORT	PRICE
Definition	14 days × €920 (lead 6, DE 6, advisor 2)	€12,880
Delivery	26 days × €920 (lead 10, DE 14, advisor 2)	€23,920
Ongoing, first 3 months	9 days × €920 (3 a month: lead 2, DE 1)	€8,280
Total, excl. VAT	**49 days × €920**	**€45,080**

- **Preliminary:** Definition and Delivery are fixed once your architecture board approves the baseline. Anything extra only by your written change request.
- **Ongoing** continues after 3 months at the same monthly rate (€2,760), cancellable with one month's notice.
- **Terms:** your standard terms and DORA ICT third-party terms accepted. No new licences. **No contractual deviations.**

Staffing basis: one person-day is 8 hours. DE EUR 115/h; DA EUR 125/h; required AI expertise adds EUR 5/h for the relevant role. Architect and other-role base EUR 115/h is a proposed commercial rate for owner review. The team has at most one architect and complementary roles. CVs, credentials, language proficiency, actual availability and exact start dates remain unverified. These are role requirements, not booked people. Fixed-price scope, client dependencies and risk allowance need agreement before commitment.

Allocation correction: Definition advisor 2/20 days = 10%; Delivery advisor 2/40 days = 5%, within the roster 10% cap. Lead/DE totals stay 22/23 days and advisor 4 days; price remains EUR 45,080. The optional VDE is not part of this total and requires separately costed AI architecture setup and run support before adoption.
