RECORDLY

LähiTapiola's first 100 days: trusted data first, then the AI roadmap

A roadmap for the Data Platforms and Analytics team that starts from a data quality baseline on your central Snowflake. On site in Espoo, entirely in Finnish. €17,040 fixed total, excl. VAT. No contract deviations.

Proposal to Samuli Rinne, Head of Data Platforms and Analytics · Recordly Oy · Helsinki

Background, aims and goals

We prioritise use cases only after the data underneath them has passed a check.

WHAT WE READ IN YOUR BRIEF	WHAT THE ROADMAP DOES ABOUT IT
Policy and claims records still have **discrepancies**	**Phase 1 is a data foundation baseline**: policy and claims reconciled in Snowflake. No use case is ranked before it.
Standalone tools created **shadow stacks** beside the warehouse	One rule: **every analytical workload runs on the central Snowflake warehouse**; inventory and retirement plan for the shadow stacks
Audits question **single-origin offshore cloud APIs**	EU-hosted options and an **exit plan** for every AI service in the roadmap
Risk and supervisory committees resist automated determinations	AI in the roadmap **supports people**. It never decides on a policy or a claim.
Initiatives stall if they drift from the **insurance-system renewal**	Every roadmap item is tied to a renewal milestone

Solution architecture: one warehouse, governed AI

LAYER	TARGET STATE	BOUNDARY
Source systems	Current insurance systems and the renewal programme's new core, both feeding Snowflake	No new integration platform
Central warehouse	**Snowflake on Azure** is the single analytical home: policy, claims, customer	Standalone tools read from it, never copy out of it
Quality layer	Automated reconciliation of policy against claims on every load, results shown beside each dataset	Roadmap items depend on its pass rate
BI	Your existing BI tool on governed Snowflake views	No new licences
AI	Use cases that assist handlers and analysts; model access through **EU-hosted endpoints in your Azure tenant** or in-warehouse options, behind a swappable interface	**Human decides**; exit plan per service

> Later build work on Snowflake and dbt could use Recordly's Virtual Data Engineer, with your staff approving every change. It is an option for the roadmap, **not part of this price**.

Implementation plan: 8 weeks to a 100-day roadmap

WEEKS	PHASE	OUTPUT	GATE
1–3	**1 • Data foundation baseline.** Reconcile policy and claims records, count and classify discrepancies, inventory shadow stacks	Quality baseline report, shadow-stack list	**Gate 1:** your team agrees which domains are trustworthy now
4–5	**2 • Use-case prioritisation**, only on domains that passed. Others are scheduled after their fix.	Scored portfolio, risk-committee view	**Gate 2:** you choose the top use cases
6–8	**3 • 100-day roadmap**, sequenced against renewal milestones	Roadmap, EU-hosting and exit options, team plan	Final review

- All workshops **on site in Espoo, entirely in Finnish**; written updates instead of recurring meetings
- **Honest unknown:** the size of the discrepancies. The baseline measures it in week 3, and the roadmap order depends on it.

Key deliverables

#	DELIVERABLE	FORMAT (FINNISH)
D1	Policy and claims data quality baseline, discrepancies by cause	Report and Snowflake queries in your repo
D2	Shadow-stack inventory with retirement plan onto Snowflake	Table, owner per item
D3	Scored use-case portfolio; AI items marked decision-support only	Workbook and summary
D4	AI hosting options: EU-hosted choices and exit plan per service	Options note, you decide
D5	100-day roadmap aligned to the insurance-system renewal	Plan with owners and milestones
D6	Team capability plan	Roles and skills

All deliverables are LähiTapiola's property. Two-hour interview: we show the baseline method on a sample of your data.

Proposed roles: Finnish delivery and Espoo attendance required

ROLE	REQUIRED EXPERTISE	REQUIRED CERTIFICATES	AVAILABILITY
Data and AI strategy lead (architect)	insurance and finance data platforms, Snowflake on Azure	SnowPro Advanced: Architect · Microsoft Certified: Azure Solutions Architect Expert	From signature, 10 days
Senior data engineer	reconciliation and data quality in Snowflake and dbt	SnowPro Core · dbt Analytics Engineering Certification	From signature, 6 days
AI engineer	governed AI on Azure	Microsoft Certified: Azure AI Engineer Associate	From signature, 2 days

Finnish and English are required; profiles and availability are unverified. Employees only. Any replacement is of equal seniority and needs your approval first.

Financials and contract deviations

Fixed total: €17,040 excl. VAT = 18 person-days

ROLE	DAYS	RATE PER DAY
Data and AI strategy lead (AI architect)	10	€960
Senior data engineer	6	€920
AI engineer	2	€960

- **Included:** on-site days and travel in Espoo, all deliverables in Finnish, no licences
- **Fixed price:** effort above plan is Recordly's risk. Invoiced on Gate 1 and on final acceptance, per your standard terms.
- **Contract deviations: none.** Your terms apply as they stand. The price is a bottom-up days × rate calculation, so you can benchmark it line by line.

Staffing basis: one person-day is 8 hours. DE EUR 115/h; DA EUR 125/h; required AI expertise adds EUR 5/h for the relevant role. Architect and other-role base EUR 115/h is a proposed commercial rate for owner review. The team has at most one architect and complementary roles. CVs, credentials, language proficiency, actual availability and exact start dates remain unverified. These are role requirements, not booked people. Fixed-price scope, client dependencies and risk allowance need agreement before commitment.

The strategy lead assesses AI hosting and governance: 10 days at EUR 120/h, including AI premium. DE 6 days at EUR 115/h and AI engineer 2 days at EUR 120/h give EUR 17,040 total. No AI build is added to this advisory scope.
